

200-KNF-0813

This knife has a 3/4 inch (19 mm) carbide tip welded to a 5/16 inch (8 mm) quick change holder. In addition to the bottom carbide insert there is also a secondary carbide insert to prevent the cast tip from wearing above the primary carbide. The tip has a 75° approach angle which means that it will not lift and pull many rocks or stumps to the surface.

This product was developed specifically for Australia where extremely abrasive soils require the use of more carbide.

Driver 200-DRV-1013 should be used to protect the tip when installing this knife on the quick change adapter.
